FACADE

Natural wood exterior cladding

March 2017

Facade panels are made to withstand the most demanding weather and environmental abuse.

Parklex is a company that specialises in wood for architecture. At our facilities, we manufacture different natural wood boards, processing them to eliminate the need for any form of maintenance or further treatment. Architects, interior designers, companies and individual consumers have already installed our products worldwide. This experience makes us knowledgeable of the key factors for innovation.

The Point – Tadley, UK – Ayre Chamberlain Gaunt Architects

The basic safety requirements reduce the risk of damage caused by accidental fire due to the characteristics of the project, construction, use and maintenance of the building to acceptable limits. In this sense, Parklex Facade reports the best possible results for organic materials, according to the European Standard EN 13501: Reaction to fire.

Facade panels emphasize the natural beauty found in real wood; its feel and natural warmth, while combining it with modern technology to create the perfect building envelope.

It can be installed as ventilated facade, as louvres or overlapping slats, on suspended ceilings, as soffits and on curved walls.

Kovner/Moss Residence in Pacific Palisades – Los Angeles, CA, United States – Emily Kovner

Ameublements Tanguay – Levis, QC, Canada – CoArchitecture

Dimensions

2440 x 1220 mm
